The autonomy and efficiency provided by Oasis Bio-Homes mean independence from third-party providers, harnessing the limitless resources that nature offers—resources that are a natural right for all humans. With the right technology, these resources can be captured and put at our service.

Never before has there been a self-sufficient technological solution with two, three, and four bedrooms that can be packed into a container and shipped to any destination worldwide. This represents a new horizon for those seeking autonomy and economic independence, free from utility bills, all within a natural setting and equipped with cutting-edge technology.

We also offer training courses for the assembly and startup of this technology, conducted by expert architects and engineers with extensive experience in sustainability and construction using state-of-the-art alternative materials. If you wish, you can get certified and become an authorized builder, enabling you to offer your services to others interested in your city or country.
